Re: Docket No. 00P-1211/CPI

Dear Commissioner Henney:

I am very angry that additives are being put into our foods, that our foods are being changed, and we, the consumers, are not being told. I want to know when something is being put into the food I consume.

It is bad enough that contaminants like insecticides are already being ingested because the FDA refuses to have the growers warn us. Now, our food will be 'Genetically Engineered' and no one - no one - knows the long term effect of that!

I try to eat as naturally as I can. I buy organic when it is available. Please don't allow those companies/people who supply our food, to add/change/engineer my food unless it is LABELED so that I can make a CHOICE.

I thank you for your attention and action in this matter.

Sincerely,

Nancy Graham
